# Outline

- 1. Summary of Previous Lecture**
- 2. Semantics of Predicate Logic**
- 3. Intermezzo**
- 4. Natural Deduction for Predicate Logic**
- 5. Soundness and Completeness**
- 6. Further Reading**

## BDD Algorithms

- ▶ **reduce** input: • OBDD  
output: • equivalent reduced OBDD with compatible variable ordering
- ▶ **restrict** input: • OBDD  $B_f$ , variable  $x$ ,  $i \in \{0, 1\}$   
output: • reduced OBDD of  $f[i/x]$  with compatible variable ordering
- ▶ **apply** input: • binary operation  $\star$  on boolean functions  
• OBDDs  $B_f$  and  $B_g$  with compatible variable orderings  
output: • reduced OBDD of  $f \star g$  with compatible variable ordering

### Theorem (Shannon expansion)

$$f = \bar{x} \cdot f[0/x] + x \cdot f[1/x]$$

for every boolean function  $f$  and variable  $x$

## BDD Algorithms

- ▶ **reduce** input: • OBDD  
output: • equivalent reduced OBDD with compatible variable ordering
- ▶ **restrict** input: • OBDD  $B_f$ , variable  $x$ ,  $i \in \{0, 1\}$   
output: • reduced OBDD of  $f[i/x]$  with compatible variable ordering
- ▶ **apply** input: • binary operation  $\star$  on boolean functions  
• OBDDs  $B_f$  and  $B_g$  with compatible variable orderings  
output: • reduced OBDD of  $f \star g$  with compatible variable ordering

### Theorem (Shannon expansion)

$f = \bar{x} \cdot f[0/x] + x \cdot f[1/x] = \bar{x} \cdot f[0/x] \oplus x \cdot f[1/x]$  for every boolean function  $f$  and variable  $x$

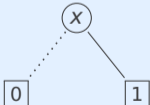

## Definition

**quantification** of boolean function  $f$  over variable  $x$ :

$$\exists x.f = f[0/x] + f[1/x]$$

$$\forall x.f = f[0/x] \cdot f[1/x]$$

## BDD operations

function $f$	OBDD $B_f$	function $f$	OBDD $B_f$	function $f$	OBDD $B_f$
0		$g + h$	$\text{apply}(+, B_g, B_h)$	$g[0/x]$	$\text{restrict}(0, x, B_g)$
1		$g \oplus h$	$\text{apply}(\oplus, B_g, B_h)$	$g[1/x]$	$\text{restrict}(1, x, B_g)$
$x$		$g \cdot h$	$\text{apply}(\cdot, B_g, B_h)$	$\exists x.g$	$\text{apply}(+, B_{g[0/x]}, B_{g[1/x]})$
		$\bar{g}$	$\text{apply}(\oplus, B_g, B_1)$	$\forall x.g$	$\text{apply}(\cdot, B_{g[0/x]}, B_{g[1/x]})$

## Remark

(reduced ordered) BDDs are not always efficient representation

hidden weighted bit function

multiplication

## Definitions

▶ **terms** in predicate logic are built from function symbols and variables according to BNF grammar  $t ::= x \mid c \mid f(t, \dots, t)$

▶ **formulas** in predicate logic are built according to BNF grammar

$$\varphi ::= P \mid P(t, \dots, t) \mid t = t \mid \perp \mid \top \mid (\neg \varphi) \mid (\varphi \wedge \varphi) \mid (\varphi \vee \varphi) \mid (\varphi \rightarrow \varphi) \mid (\forall x \varphi) \mid (\exists x \varphi)$$

▶ occurrence of variable  $x$  in formula  $\varphi$  is **free in  $\varphi$**  if it is leaf node in parse tree of  $\varphi$  such that there is no node  $\forall x$  or  $\exists x$  on path to root node; all other occurrences of  $x$  are bound

▶  $\varphi[t/x]$  is result of replacing all **free** occurrences of  $x$  in  $\varphi$  by  $t$

▶  $t$  is **free for  $x$**  in  $\varphi$  if variables in  $t$  do not become bound in  $\varphi[t/x]$

▶ **sentence** is formula without free variables

## Part I: Propositional Logic

algebraic normal forms, binary decision diagrams, conjunctive normal forms, DPLL, Horn formulas, natural deduction, Post's adequacy theorem, resolution, SAT, semantics, sorting networks, soundness and completeness, syntax, Tseitin's transformation

## Part II: Predicate Logic

natural deduction, quantifier equivalences, resolution, semantics, Skolemization, syntax, undecidability, unification

## Part III: Model Checking

adequacy, branching-time temporal logic, CTL\*, fairness, linear-time temporal logic, model checking algorithms, symbolic model checking

## Part I: Propositional Logic

algebraic normal forms, binary decision diagrams, conjunctive normal forms, DPLL, Horn formulas, natural deduction, Post's adequacy theorem, resolution, SAT, semantics, sorting networks, soundness and completeness, syntax, Tseitin's transformation

## Part II: Predicate Logic

natural deduction, quantifier equivalences, resolution, semantics, Skolemization, syntax, undecidability, unification

## Part III: Model Checking

adequacy, branching-time temporal logic, CTL\*, fairness, linear-time temporal logic, model checking algorithms, symbolic model checking

## Examples

function and predicate symbols

►  $\mathcal{P}$   $A, B$ : arity 2     $P, S, L$ : arity 1     $\mathcal{F}$   $m$ : arity 0

## Examples

function and predicate symbols

►  $\mathcal{P}$   $A, B$ : arity 2     $P, S, L$ : arity 1     $\mathcal{F}$   $m$ : arity 0

① model  $\mathcal{M}_1$

► universe  $A_1$ : set of computer science students and professors of University of Innsbruck together with all lectures offered in SS 2024 in bachelor program computer science

►  $A^{\mathcal{M}_1} = \{(x, y) \mid x \text{ admires } y\}$      $P^{\mathcal{M}_1} = \{x \mid x \text{ is professor}\}$      $L^{\mathcal{M}_1} = \{x \mid x \text{ is lecture}\}$   
 $B^{\mathcal{M}_1} = \{(x, y) \mid x \text{ attended } y\}$      $S^{\mathcal{M}_1} = \{x \mid x \text{ is student}\}$      $m^{\mathcal{M}_1} = \text{Aki Suzuki}$

## Examples

function and predicate symbols

►  $\mathcal{P}$   $A, B$ : arity 2     $P, S, L$ : arity 1     $\mathcal{F}$   $m$ : arity 0

① model  $\mathcal{M}_1$  is well-defined only if Aki Suzuki  $\in A_1$

► universe  $A_1$ : set of computer science students and professors of University of Innsbruck together with all lectures offered in SS 2024 in bachelor program computer science

►  $A^{\mathcal{M}_1} = \{(x, y) \mid x \text{ admires } y\}$      $P^{\mathcal{M}_1} = \{x \mid x \text{ is professor}\}$      $L^{\mathcal{M}_1} = \{x \mid x \text{ is lecture}\}$   
 $B^{\mathcal{M}_1} = \{(x, y) \mid x \text{ attended } y\}$      $S^{\mathcal{M}_1} = \{x \mid x \text{ is student}\}$      $m^{\mathcal{M}_1} = \text{Aki Suzuki}$

## Examples

function and predicate symbols

►  $\mathcal{P}$   $A, B$ : arity 2     $P, S, L$ : arity 1     $\mathcal{F}$   $m$ : arity 0

① model  $\mathcal{M}_1$  is well-defined only if Aki Suzuki  $\in A_1$

► universe  $A_1$ : set of computer science students and professors of University of Innsbruck together with all lectures offered in SS 2024 in bachelor program computer science

►  $A^{\mathcal{M}_1} = \{(x, y) \mid x \text{ admires } y\}$      $P^{\mathcal{M}_1} = \{x \mid x \text{ is professor}\}$      $L^{\mathcal{M}_1} = \{x \mid x \text{ is lecture}\}$

② model  $\mathcal{M}_2$

► universe  $A_2$ : set of natural numbers

►  $A^{\mathcal{M}_2} = \{(x, y) \mid x > y\}$      $P^{\mathcal{M}_2} = \{x \mid x \text{ is prime number}\}$      $L^{\mathcal{M}_2} = \{2, 7, 111\}$   
 $B^{\mathcal{M}_2} = \{(x, y) \mid x + y = 5\}$      $S^{\mathcal{M}_2} = \{x^2 \mid x > 1\}$      $m^{\mathcal{M}_2} = 13$

## Examples

function and predicate symbols

►  $\mathcal{P}$   $A, B$ : arity 2     $P, S, L$ : arity 1     $\mathcal{F}$   $m$ : arity 0

① model  $\mathcal{M}_1$  is well-defined only if Aki Suzuki  $\in A_1$  ("natural" model)

► universe  $A_1$ : set of computer science students and professors of University of Innsbruck together with all lectures offered in SS 2024 in bachelor program computer science

►  $A^{\mathcal{M}_1} = \{(x, y) \mid x \text{ admires } y\}$      $P^{\mathcal{M}_1} = \{x \mid x \text{ is professor}\}$      $L^{\mathcal{M}_1} = \{x \mid x \text{ is lecture}\}$   
 $B^{\mathcal{M}_1} = \{(x, y) \mid x \text{ attended } y\}$      $S^{\mathcal{M}_1} = \{x \mid x \text{ is student}\}$      $m^{\mathcal{M}_1} = \text{Aki Suzuki}$

② model  $\mathcal{M}_2$

► universe  $A_2$ : set of natural numbers

►  $A^{\mathcal{M}_2} = \{(x, y) \mid x > y\}$      $P^{\mathcal{M}_2} = \{x \mid x \text{ is prime number}\}$      $L^{\mathcal{M}_2} = \{2, 7, 111\}$   
 $B^{\mathcal{M}_2} = \{(x, y) \mid x + y = 5\}$      $S^{\mathcal{M}_2} = \{x^2 \mid x > 1\}$      $m^{\mathcal{M}_2} = 13$

## Definitions

- ▶ **environment (look-up table)** for model  $\mathcal{M} = (A, \{f^{\mathcal{M}}\}_{f \in \mathcal{F}}, \{P^{\mathcal{M}}\}_{P \in \mathcal{P}})$  is mapping  $I$  from variables to elements of  $A$

## Definitions

- ▶ environment (look-up table) for model  $\mathcal{M} = (A, \{f^{\mathcal{M}}\}_{f \in \mathcal{F}}, \{P^{\mathcal{M}}\}_{P \in \mathcal{P}})$  is mapping  $I$  from variables to elements of  $A$
- ▶ value  $t^{\mathcal{M}, I}$  of term  $t$  in model  $\mathcal{M}$  relative to environment  $I$  is defined inductively:

$$t^{\mathcal{M}, I} = \begin{cases} I(t) & \text{if } t \text{ is variable} \end{cases}$$

## Definitions

- ▶ environment (look-up table) for model  $\mathcal{M} = (A, \{f^{\mathcal{M}}\}_{f \in \mathcal{F}}, \{P^{\mathcal{M}}\}_{P \in \mathcal{P}})$  is mapping  $I$  from variables to elements of  $A$
- ▶ value  $t^{\mathcal{M}, I}$  of term  $t$  in model  $\mathcal{M}$  relative to environment  $I$  is defined inductively:

$$t^{\mathcal{M}, I} = \begin{cases} I(t) & \text{if } t \text{ is variable} \\ f^{\mathcal{M}}(t_1^{\mathcal{M}, I}, \dots, t_n^{\mathcal{M}, I}) & \text{if } t = f(t_1, \dots, t_n) \end{cases}$$

## Definitions

- ▶ environment (look-up table) for model  $\mathcal{M} = (A, \{f^{\mathcal{M}}\}_{f \in \mathcal{F}}, \{P^{\mathcal{M}}\}_{P \in \mathcal{P}})$  is mapping  $I$  from variables to elements of  $A$
- ▶ value  $t^{\mathcal{M}, I}$  of term  $t$  in model  $\mathcal{M}$  relative to environment  $I$  is defined inductively:

$$t^{\mathcal{M}, I} = \begin{cases} I(t) & \text{if } t \text{ is variable} \\ f^{\mathcal{M}}(t_1^{\mathcal{M}, I}, \dots, t_n^{\mathcal{M}, I}) & \text{if } t = f(t_1, \dots, t_n) \end{cases}$$

- ▶ given environment  $I$ , variable  $x$ , and element  $a \in A$ , environment  $I[x \mapsto a]$  is defined as

$$I[x \mapsto a](y) = \begin{cases} a & \text{if } y = x \\ I(y) & \text{if } y \neq x \end{cases}$$

## Example

function symbols  $\mathcal{F}$

▶  $f$ : arity 2    $g, h$ : arity 1    $a$ : arity 0

model  $\mathcal{M}$

▶ universe  $A$ : set of natural numbers

▶  $f^{\mathcal{M}}(x, y) = x \times y$     $g^{\mathcal{M}}(x) = x + 1$     $h^{\mathcal{M}}(x) = x^2$     $a^{\mathcal{M}} = 2$

environment  $I$

▶  $I(x) = 3$     $I(y) = 5$    ...

## Example

function symbols  $\mathcal{F}$

▶  $f$ : arity 2    $g, h$ : arity 1    $a$ : arity 0

model  $\mathcal{M}$

▶ universe  $A$ : set of natural numbers

▶  $f^{\mathcal{M}}(x, y) = x \times y$     $g^{\mathcal{M}}(x) = x + 1$     $h^{\mathcal{M}}(x) = x^2$     $a^{\mathcal{M}} = 2$

environment  $I$

▶  $I(x) = 3$     $I(y) = 5$    ...

$$f(x, g(y))^{\mathcal{M}, I} = 18$$

## Example

function symbols  $\mathcal{F}$

▶  $f$ : arity 2    $g, h$ : arity 1    $a$ : arity 0

model  $\mathcal{M}$

▶ universe  $A$ : set of natural numbers

▶  $f^{\mathcal{M}}(x, y) = x \times y$     $g^{\mathcal{M}}(x) = x + 1$     $h^{\mathcal{M}}(x) = x^2$     $a^{\mathcal{M}} = 2$

environment  $I$

▶  $I(x) = 3$     $I(y) = 5$    ...

$$f(x, g(y))^{\mathcal{M}, I} = 18 \quad f(x, g(f(x, h(x))))^{\mathcal{M}, I} = 84$$

## Example

function symbols  $\mathcal{F}$

▶  $f$ : arity 2    $g, h$ : arity 1    $a$ : arity 0

model  $\mathcal{M}$

▶ universe  $A$ : set of natural numbers

▶  $f^{\mathcal{M}}(x, y) = x \times y$     $g^{\mathcal{M}}(x) = x + 1$     $h^{\mathcal{M}}(x) = x^2$     $a^{\mathcal{M}} = 2$

environment  $I$

▶  $I(x) = 3$     $I(y) = 5$    ...

$$f(x, g(y))^{\mathcal{M}, I} = 18 \quad f(x, g(f(x, h(x))))^{\mathcal{M}, I} = 84 \quad f(h(a), g(f(a, h(h(a))))))^{\mathcal{M}, I} = ?$$

## Example

function symbols  $\mathcal{F}$

▶  $f$ : arity 2    $g, h$ : arity 1    $a$ : arity 0

model  $\mathcal{M}$

▶ universe  $A$ : set of natural numbers

▶  $f^{\mathcal{M}}(x, y) = x \times y$     $g^{\mathcal{M}}(x) = x + 1$     $h^{\mathcal{M}}(x) = x^2$     $a^{\mathcal{M}} = 2$

environment  $I$

▶  $I(x) = 3$     $I(y) = 5$    ...

$$f(x, g(y))^{\mathcal{M}, I} = 18 \quad f(x, g(f(x, h(x))))^{\mathcal{M}, I} = 84 \quad f(h(a), g(f(a, h(h(a))))^{\mathcal{M}, I} = 132$$

## Definition

**satisfaction** relation  $\mathcal{M} \vDash_I \varphi$  (model  $\mathcal{M}$ , environment  $I$ , formula  $\varphi$ ) is defined inductively

## Definition

**satisfaction** relation  $\mathcal{M} \vDash_I \varphi$  (model  $\mathcal{M}$ , environment  $I$ , formula  $\varphi$ ) is defined inductively:

$$\left. \begin{array}{l} \mathcal{M} \vDash_I \top \\ \mathcal{M} \not\vDash_I \perp \\ \mathcal{M} \vDash_I \varphi \iff \end{array} \right\} \begin{array}{l} (t_1^{\mathcal{M}, I}, \dots, t_n^{\mathcal{M}, I}) \in P^{\mathcal{M}} \\ \text{if } \varphi = P(t_1, \dots, t_n) \end{array}$$

## Definition

**satisfaction** relation  $\mathcal{M} \vDash_I \varphi$  (model  $\mathcal{M}$ , environment  $I$ , formula  $\varphi$ ) is defined inductively:

## Definition

**sentence** is formula without free variables

## Definition

sentence is formula without free variables

## Lemma

if  $\varphi$  is sentence then

$$\mathcal{M} \models_I \varphi \iff \mathcal{M} \models_{I'} \varphi$$

for all environments  $I$  and  $I'$

## Definition

sentence is formula without free variables

## Lemma

if  $\varphi$  is sentence then

$$\mathcal{M} \vDash_I \varphi \iff \mathcal{M} \vDash_{I'} \varphi$$

for all environments  $I$  and  $I'$

truth value of sentence does not depend on environment

## Definition

sentence is formula without free variables

## Lemma

if  $\varphi$  is sentence then

$$\mathcal{M} \models_I \varphi \iff \mathcal{M} \models_{I'} \varphi$$

for all environments  $I$  and  $I'$

truth value of sentence does not depend on environment

## Notation

$\mathcal{M} \models \varphi$  instead of  $\mathcal{M} \models_I \varphi$  for sentences  $\varphi$

## Example

► function and predicate symbols

$\mathcal{P}$   $R$ : arity 2     $\mathcal{F}$   $f$ : arity 1     $a$ : arity 0

## Example

▶ function and predicate symbols

$\mathcal{P}$   $R$ : arity 2     $\mathcal{F}$   $f$ : arity 1     $a$ : arity 0

▶ model  $\mathcal{M}_1$ : universe  $A_1 = \mathbb{N}$

$R^{\mathcal{M}_1} = \{(x, y) \mid x < y\}$      $f^{\mathcal{M}_1}(x) = 2x$      $a^{\mathcal{M}_1} = 0$

## Example

▶ function and predicate symbols

$\mathcal{P}$   $R$ : arity 2     $\mathcal{F}$   $f$ : arity 1     $a$ : arity 0

▶ model  $\mathcal{M}_1$ : universe  $A_1 = \mathbb{N}$

$R^{\mathcal{M}_1} = \{(x, y) \mid x < y\}$      $f^{\mathcal{M}_1}(x) = 2x$      $a^{\mathcal{M}_1} = 0$

▶ model  $\mathcal{M}_2$ : universe  $A_2 = \mathbb{R}$

$R^{\mathcal{M}_2} = \{(x, y) \mid x < y\}$      $f^{\mathcal{M}_2}(x) = 2x$      $a^{\mathcal{M}_2} = 0$

## Example

- ▶ function and predicate symbols       $\mathcal{P}$     $R$ : arity 2       $\mathcal{F}$     $f$ : arity 1       $a$ : arity 0
- ▶ model  $\mathcal{M}_1$ :    universe  $A_1 = \mathbb{N}$        $R^{\mathcal{M}_1} = \{(x, y) \mid x < y\}$        $f^{\mathcal{M}_1}(x) = 2x$        $a^{\mathcal{M}_1} = 0$
- ▶ model  $\mathcal{M}_2$ :    universe  $A_2 = \mathbb{R}$        $R^{\mathcal{M}_2} = \{(x, y) \mid x < y\}$        $f^{\mathcal{M}_2}(x) = 2x$        $a^{\mathcal{M}_2} = 0$
- ▶ model  $\mathcal{M}_3$ :    universe  $A_3 = \{0, 1\}$        $R^{\mathcal{M}_3} = \{(x, y) \mid x < y\}$        $f^{\mathcal{M}_3}(x) = \bar{x}$        $a^{\mathcal{M}_3} = 0$

## Example

- ▶ function and predicate symbols       $\mathcal{P}$     $R$ : arity 2       $\mathcal{F}$     $f$ : arity 1       $a$ : arity 0
- ▶ model  $\mathcal{M}_1$ :    universe  $A_1 = \mathbb{N}$        $R^{\mathcal{M}_1} = \{(x, y) \mid x < y\}$        $f^{\mathcal{M}_1}(x) = 2x$        $a^{\mathcal{M}_1} = 0$
- ▶ model  $\mathcal{M}_2$ :    universe  $A_2 = \mathbb{R}$        $R^{\mathcal{M}_2} = \{(x, y) \mid x < y\}$        $f^{\mathcal{M}_2}(x) = 2x$        $a^{\mathcal{M}_2} = 0$
- ▶ model  $\mathcal{M}_3$ :    universe  $A_3 = \{0, 1\}$        $R^{\mathcal{M}_3} = \{(x, y) \mid x < y\}$        $f^{\mathcal{M}_3}(x) = \bar{x}$        $a^{\mathcal{M}_3} = 0$
- ▶ formulas

$$\varphi_1 = \exists x R(a, x)$$

## Example

- ▶ function and predicate symbols       $\mathcal{P}$     $R$ : arity 2       $\mathcal{F}$     $f$ : arity 1       $a$ : arity 0
- ▶ model  $\mathcal{M}_1$ :    universe  $A_1 = \mathbb{N}$        $R^{\mathcal{M}_1} = \{(x, y) \mid x < y\}$      $f^{\mathcal{M}_1}(x) = 2x$      $a^{\mathcal{M}_1} = 0$
- ▶ model  $\mathcal{M}_2$ :    universe  $A_2 = \mathbb{R}$        $R^{\mathcal{M}_2} = \{(x, y) \mid x < y\}$      $f^{\mathcal{M}_2}(x) = 2x$      $a^{\mathcal{M}_2} = 0$

## Question

Which of the following statements are true ?

- A** The semantic entailment  $\forall x \varphi \models \exists x \varphi$  holds for all formulas  $\varphi$ .
- B** The formulas  $\exists x \forall y Q(x, y)$  and  $\forall y Q(a, y)$  are equisatisfiable.
- C** The set  $\{\forall x (P(x) \rightarrow \perp), \exists y P(y)\}$  is consistent.
- D** The semantic entailment  $x = y \models f(x) = f(y)$  holds.

Equality

Universal Quantification

Existential Quantification

5. Soundness and Completeness

6. Further Reading

► equality introduction

$$\frac{}{t = t} =i$$

## Definitions

- ▶ equality introduction

$$\frac{}{t = t} =i$$

- ▶ **equality elimination** "replace equals by equals"

$$\frac{t_1 = t_2 \quad \varphi[t_1/x]}{\varphi[t_2/x]} =e$$

provided  $t_1$  and  $t_2$  are free for  $x$  in  $\varphi$

## Examples

①  $s = t \vdash t = s$  is valid:

1      $s = t$    premise

2      $s = s$    =i

3      $t = s$    =e 1,2

## Examples

①  $s = t \vdash t = s$  is valid:

1      $s = t$    premise

2      $s = s$    =i

3      $t = s$    =e 1,2   with  $\varphi = (x = s)$ ,  $t_1 = s$ ,  $t_2 = t$

## Examples

①  $s = t \vdash t = s$  is valid:

1  $s = t$  premise

2  $s = s =i$

3  $t = s =e 1, 2$  with  $\varphi = (x = s)$ ,  $t_1 = s$ ,  $t_2 = t$

②  $s = t, t = u \vdash s = u$  is valid:

1  $s = t$  premise

2  $t = u$  premise

3  $s = u =e 2, 1$  with  $\varphi = (s = x)$ ,  $t_1 = t$ ,  $t_2 = u$

►  $\forall$  elimination

$$\frac{\forall x \varphi}{\varphi[t/x]} \forall e$$

provided  $t$  is free for  $x$  in  $\varphi$

## Definitions

- ▶  $\forall$  elimination

$$\frac{\forall x \varphi}{\varphi[t/x]} \quad \forall e$$

provided  $t$  is free for  $x$  in  $\varphi$

- ▶  $\forall$  introduction

$$\frac{\boxed{\begin{array}{c} x_0 \\ \vdots \\ \varphi[x_0/x] \end{array}}}{\forall x \varphi} \quad \forall i$$

where  $x_0$  is fresh variable that is used only inside box

## Example

$\forall x (P(x) \rightarrow Q(x)), \forall x P(x) \vdash \forall x Q(x)$  is valid:

1             $\forall x (P(x) \rightarrow Q(x))$     premise

2             $\forall x P(x)$                     premise

$\forall x Q(x)$

## Example

$\forall x (P(x) \rightarrow Q(x)), \forall x P(x) \vdash \forall x Q(x)$  is valid:

1  $\forall x (P(x) \rightarrow Q(x))$  premise

2  $\forall x P(x)$  premise

3

$x_0$
$Q(x_0)$
$\forall x Q(x)$ $\forall i$

## Example

$\forall x (P(x) \rightarrow Q(x)), \forall x P(x) \vdash \forall x Q(x)$  is valid:

1             $\forall x (P(x) \rightarrow Q(x))$     premise

2             $\forall x P(x)$                     premise

3             $x_0 \quad P(x_0) \rightarrow Q(x_0)$      $\forall e$  1

$Q(x_0)$

$\forall x Q(x)$

$\forall i$

## Example

$\forall x (P(x) \rightarrow Q(x)), \forall x P(x) \vdash \forall x Q(x)$  is valid:

1             $\forall x (P(x) \rightarrow Q(x))$     premise

2             $\forall x P(x)$                     premise

3             $x_0 \quad P(x_0) \rightarrow Q(x_0)$      $\forall e$  1

4             $P(x_0)$                              $\forall e$  2

$Q(x_0)$

$\forall x Q(x)$

$\forall i$

## Example

$\forall x (P(x) \rightarrow Q(x)), \forall x P(x) \vdash \forall x Q(x)$  is valid:

1	$\forall x (P(x) \rightarrow Q(x))$	premise
2	$\forall x P(x)$	premise
3	$x_0 P(x_0) \rightarrow Q(x_0)$	$\forall e$ 1
4	$P(x_0)$	$\forall e$ 2
5	$Q(x_0)$	$\rightarrow e$ 3, 4
	$\forall x Q(x)$	$\forall i$

## Example

$\forall x (P(x) \rightarrow Q(x)), \forall x P(x) \vdash \forall x Q(x)$  is valid:

1	$\forall x (P(x) \rightarrow Q(x))$	premise
2	$\forall x P(x)$	premise
3	$x_0 P(x_0) \rightarrow Q(x_0)$	$\forall e$ 1
4	$P(x_0)$	$\forall e$ 2
5	$Q(x_0)$	$\rightarrow e$ 3, 4
6	$\forall x Q(x)$	$\forall i$ 3–5

## Example

$P \rightarrow \forall x Q(x) \vdash \forall x (P \rightarrow Q(x))$  is valid:

1	$P \rightarrow \forall x Q(x)$	premise
2	$x_0$	
3	$P$	assumption
4	$\forall x Q(x)$	$\rightarrow e$ 1, 3
5	$Q(x_0)$	$\forall e$ 4
6	$P \rightarrow Q(x_0)$	$\rightarrow i$ 3–5
7	$\forall x (P \rightarrow Q(x))$	$\forall i$ 2–6

►  $\exists$  introduction

$$\frac{\varphi[t/x]}{\exists x \varphi} \exists i$$

provided  $t$  is free for  $x$  in  $\varphi$

## Definitions

- ▶  $\exists$  introduction

$$\frac{\varphi[t/x]}{\exists x \varphi} \exists i$$

provided  $t$  is free for  $x$  in  $\varphi$

- ▶  $\exists$  elimination

$$\frac{\exists x \varphi \quad \boxed{\begin{array}{c} x_0 \quad \varphi[x_0/x] \\ \vdots \\ \chi \end{array}}}{\chi} \exists e$$

where  $x_0$  is fresh variable that is used only inside box

## Example

$\forall x (P(x) \rightarrow Q(x)), \exists x P(x) \vdash \exists x Q(x)$  is valid:

1             $\forall x (P(x) \rightarrow Q(x))$     premise

2             $\exists x P(x)$                     premise

$\exists x Q(x)$

## Example

$\forall x (P(x) \rightarrow Q(x)), \exists x P(x) \vdash \exists x Q(x)$  is valid:

1  $\forall x (P(x) \rightarrow Q(x))$  premise

2  $\exists x P(x)$  premise

3  $x_0 P(x_0)$  assumption

$\exists x Q(x)$

$\exists x Q(x)$   $\exists e$  2

## Example

$\forall x (P(x) \rightarrow Q(x)), \exists x P(x) \vdash \exists x Q(x)$  is valid:

1  $\forall x (P(x) \rightarrow Q(x))$  premise

2  $\exists x P(x)$  premise

3  $x_0 P(x_0)$  assumption

4  $P(x_0) \rightarrow Q(x_0)$   $\forall e$  1

$\exists x Q(x)$

$\exists x Q(x)$   $\exists e$  2

## Example

$\forall x (P(x) \rightarrow Q(x)), \exists x P(x) \vdash \exists x Q(x)$  is valid:

1	$\forall x (P(x) \rightarrow Q(x))$	premise
2	$\exists x P(x)$	premise
3	$x_0 P(x_0)$	assumption
4	$P(x_0) \rightarrow Q(x_0)$	$\forall e$ 1
5	$Q(x_0)$	$\rightarrow e$ 4, 3
	$\exists x Q(x)$	
	$\exists x Q(x)$	$\exists e$ 2

## Example

$\forall x (P(x) \rightarrow Q(x)), \exists x P(x) \vdash \exists x Q(x)$  is valid:

1	$\forall x (P(x) \rightarrow Q(x))$	premise
2	$\exists x P(x)$	premise
3	$x_0 P(x_0)$	assumption
4	$P(x_0) \rightarrow Q(x_0)$	$\forall e$ 1
5	$Q(x_0)$	$\rightarrow e$ 4, 3
6	$\exists x Q(x)$	$\exists i$ 5
	$\exists x Q(x)$	$\exists e$ 2

## Example

$\forall x (P(x) \rightarrow Q(x)), \exists x P(x) \vdash \exists x Q(x)$  is valid:

1	$\forall x (P(x) \rightarrow Q(x))$	premise
2	$\exists x P(x)$	premise
3	$x_0 P(x_0)$	assumption
4	$P(x_0) \rightarrow Q(x_0)$	$\forall e$ 1
5	$Q(x_0)$	$\rightarrow e$ 4, 3
6	$\exists x Q(x)$	$\exists i$ 5
7	$\exists x Q(x)$	$\exists e$ 2, 3-6

## Lemma

$\forall x \varphi \vdash \exists x \varphi$  is valid

## Lemma

$\forall x \varphi \vdash \exists x \varphi$  is valid

## Proof

1     $\forall x \varphi$     premise

## Lemma

$\forall x \varphi \vdash \exists x \varphi$  is valid

## Proof

- 1  $\forall x \varphi$  premise
- 2  $\varphi[x/x]$   $\forall e$  1

## Lemma

$\forall x \varphi \vdash \exists x \varphi$  is valid

## Proof

- 1     $\forall x \varphi$     premise
- 2     $\varphi[x/x]$   $\forall e$  1
- 3     $\exists x \varphi$      $\exists i$  2

## Example

$\exists x P(x), \forall x \forall y (P(x) \rightarrow Q(y)) \vdash \forall y Q(y)$  is valid:

1	$\exists x P(x)$	premise
2	$\forall x \forall y (P(x) \rightarrow Q(y))$	premise
3	$y_0$	
4	$x_0 P(x_0)$	assumption
5	$\forall y (P(x_0) \rightarrow Q(y))$	$\forall e$ 2
6	$P(x_0) \rightarrow Q(y_0)$	$\forall e$ 5
7	$Q(y_0)$	$\rightarrow e$ 6, 4
8	$Q(y_0)$	$\exists e$ 1, 4-7
9	$\forall y Q(y)$	$\forall i$ 3-8

## Example

$\exists x P(x), \forall x \forall y (P(x) \rightarrow Q(y)) \vdash \forall y Q(y)$  is valid:

1	$\exists x P(x)$	premise
2	$\forall x \forall y (P(x) \rightarrow Q(y))$	premise
3	$z$	
4	$x_0 P(x_0)$	assumption
5	$\forall y (P(x_0) \rightarrow Q(y))$	$\forall e$ 2
6	$P(x_0) \rightarrow Q(z)$	$\forall e$ 5
7	$Q(z)$	$\rightarrow e$ 6, 4
8	$Q(z)$	$\exists e$ 1, 4-7
9	$\forall y Q(y)$	$\forall i$ 3-8

## Example

$\exists x P(x), \forall x \forall y (P(x) \rightarrow Q(y)) \vdash \forall y Q(y)$  is valid:

1	$\exists x P(x)$	premise
2	$\forall x \forall y (P(x) \rightarrow Q(y))$	premise
3	$z$	
4	$y_0 P(y_0)$	assumption
5	$\forall y (P(y_0) \rightarrow Q(y))$	$\forall e$ 2
6	$P(y_0) \rightarrow Q(z)$	$\forall e$ 5
7	$Q(z)$	$\rightarrow e$ 6, 4
8	$Q(z)$	$\exists e$ 1, 4-7
9	$\forall y Q(y)$	$\forall i$ 3-8

## Lemma

$\neg \forall x \phi \vdash \exists x \neg \phi$  is valid

## Lemma

$\neg \forall x \varphi \vdash \exists x \neg \varphi$  is valid

## Proof

1	$\neg \forall x \varphi$	premise
2	$\neg \exists x \neg \varphi$	assumption
3	$x_0$	
4	$\neg \varphi[x_0/x]$	assumption
5	$\exists x \neg \varphi$	$\exists i$ 4
6	$\perp$	$\neg e$ 5, 2
7	$\varphi[x_0/x]$	PBC 4-6
8	$\forall x \varphi$	$\forall i$ 3-7
9	$\perp$	$\neg e$ 8, 1
10	$\exists x \neg \varphi$	PBC 2-9

## Example

$\forall x \exists y P(x, y), \forall x \forall y (P(x, y) \rightarrow Q(x, y)) \vdash \exists y \forall x Q(x, y)$  is valid:

1	$\forall x \exists y P(x, y)$	premise
2	$\forall x \forall y (P(x, y) \rightarrow Q(x, y))$	premise
3	$x_0 \exists y P(x_0, y)$	$\forall e$ 1
4	$\forall y (P(x_0, y) \rightarrow Q(x_0, y))$	$\forall e$ 2
5	$y_0 P(x_0, y_0)$	assumption
6	$P(x_0, y_0) \rightarrow Q(x_0, y_0)$	$\forall e$ 4
7	$Q(x_0, y_0)$	$\rightarrow e$ 6, 5
8	$Q(x_0, y_0)$	$\exists e$ 3, 5–7
9	$\forall x Q(x, y_0)$	$\forall i$ 3–8
10	$\exists y \forall x Q(x, y)$	$\exists i$ 9

## Example

$\forall x \exists y P(x, y), \forall x \forall y (P(x, y) \rightarrow Q(x, y)) \vdash \exists y \forall x Q(x, y)$  is **not** valid:

1	$\forall x \exists y P(x, y)$	premise
2	$\forall x \forall y (P(x, y) \rightarrow Q(x, y))$	premise
3	$x_0 \exists y P(x_0, y)$	$\forall e$ 1
4	$\forall y (P(x_0, y) \rightarrow Q(x_0, y))$	$\forall e$ 2
5	$y_0 P(x_0, y_0)$	assumption
6	$P(x_0, y_0) \rightarrow Q(x_0, y_0)$	$\forall e$ 4
7	$Q(x_0, y_0)$	$\rightarrow e$ 6, 5
8	$Q(x_0, y_0)$	$\exists e$ 3, 5–7
9	$\forall x Q(x, y_0)$	$\forall i$ 3–8
10	$\exists y \forall x Q(x, y)$	$\exists i$ 9

## Example

$\forall x \exists y P(x, y), \forall x \forall y (P(x, y) \rightarrow Q(x, y)) \not\equiv \exists y \forall x Q(x, y)$

## Example

$$\forall x \exists y P(x, y), \forall x \forall y (P(x, y) \rightarrow Q(x, y)) \not\equiv \exists y \forall x Q(x, y)$$

model  $\mathcal{M}$

- ▶ universe  $A$ : set of natural numbers
- ▶  $P^{\mathcal{M}} = Q^{\mathcal{M}} = \{(x, y) \mid x < y\}$

## Example

$\forall x \exists y P(x, y), \forall x \forall y (P(x, y) \rightarrow Q(x, y)) \not\models \exists y \forall x Q(x, y)$

model  $\mathcal{M}$

- ▶ universe  $A$ : set of natural numbers
- ▶  $P^{\mathcal{M}} = Q^{\mathcal{M}} = \{(x, y) \mid x < y\}$

$\mathcal{M} \models \forall x \exists y P(x, y)$

## Example

$$\forall x \exists y P(x, y), \forall x \forall y (P(x, y) \rightarrow Q(x, y)) \not\models \exists y \forall x Q(x, y)$$

model  $\mathcal{M}$

- ▶ universe  $A$ : set of natural numbers
- ▶  $P^{\mathcal{M}} = Q^{\mathcal{M}} = \{(x, y) \mid x < y\}$

$$\mathcal{M} \models \forall x \exists y P(x, y)$$

$$\mathcal{M} \models \forall x \forall y (P(x, y) \rightarrow Q(x, y))$$

## Example

$\forall x \exists y P(x, y), \forall x \forall y (P(x, y) \rightarrow Q(x, y)) \not\models \exists y \forall x Q(x, y)$

model  $\mathcal{M}$

► universe  $A$ : set of natural numbers

►  $P^{\mathcal{M}} = Q^{\mathcal{M}} = \{(x, y) \mid x < y\}$

$\mathcal{M} \models \forall x \exists y P(x, y)$

$\mathcal{M} \models \forall x \forall y (P(x, y) \rightarrow Q(x, y))$

$\mathcal{M} \not\models \exists y \forall x Q(x, y)$

# Outline
