(\*)

In addition to the below given problems, kindly study Chapter 10 in the lecture notes. Referenced problems can also be found there. In the lecture only marked problems will be discussed; for solutions to the other problems please contact Georg Moser.

2. Consider the clause set:

$$\mathcal{C}_1 = \{ \mathsf{P}(a), \neg \mathsf{P}(x) \lor \mathsf{P}(\mathsf{f}(x)), \neg \mathsf{P}(\mathsf{f}(x)) \lor \mathsf{Q}(y), \neg \mathsf{Q}(\mathsf{g}(x,x)) \} \; .$$

- a) Provide a Herbrand interpretation  $\mathcal{I}$  that falsifies the set  $\mathcal{C}_1$ , that is  $\mathcal{I} \not\models \mathcal{C}_1$ .
- b) Does there exists a Herbrand model for  $C_1$ ?
- 3. Consider the clause set:

$$C_2 = \{ \mathsf{P}(x) \vee \mathsf{Q}(\mathsf{f}(a)), \neg \mathsf{P}(x) \vee \mathsf{Q}(x), \mathsf{P}(\mathsf{f}(x)) \vee \neg \mathsf{Q}(y), \neg \mathsf{P}(x) \vee \neg \mathsf{Q}(\mathsf{f}(\mathsf{a})) \} \ .$$

Give a closed semantic tree for  $C_2$ .

4. Consider the clause set:

$$\mathcal{C}_3 = \{ \mathsf{P}(x,\mathsf{f}(x)), \neg \mathsf{P}(\mathsf{a},\mathsf{f}(x)) \vee \mathsf{R}(x), \neg \mathsf{R}(x) \} \ .$$

Give a closed semantic tree for  $C_3$ .

5. Consider the clause set:

$$\mathcal{C}_4 = \{ \mathsf{P}(\mathsf{h}(x,\mathsf{h}(\mathsf{a},\mathsf{b}))), \neg \mathsf{P}(\mathsf{h}(x,x)) \} \ .$$

Give a closed semantic tree for  $C_4$ .
